STAFFORD, TEXAS

THE YUDARO IDEA

Connect company knowledge to daily operations.

Yudaro combines private enterprise AI, Odoo ERP, workflow automation, and practical implementation around the way your company actually works.

Company information remains controlled.

ERP supplies a dependable operational record.

AI helps people act on approved information.

Human review stays in important decisions.

Seven industries. Practical AI and ERP examples for each.

01 / THE OPPORTUNITY

Where growing businesses lose time and control.

Operational friction accumulates in handoffs, duplicate records, delayed answers, and knowledge that only one person can find.

**Scattered data****Slow information search****Disconnected systems****Limited management insight**

AI grounded in your business.

Private AI works from approved company knowledge, policies, procedures, and documents so employees can retrieve useful answers while the business retains control.

PRIVATE AI / SOP SEARCH

Find the right SOP. Follow the right steps.

Turn approved procedures into a searchable company knowledge base. Employees can ask in everyday language, find relevant instructions and check the original source before taking action.

UFS AI Assistant

Explored search_knowledge_files, query_knowledge_files, 3 view_file

Here is the checklist from the approved SOP "Logistics Department – Daily Invoice, Payment & Filing Process" (V1.0)

Receive Payment...ated).docx :

1. Receive & Sort (after Checker approval) Receive Payment...ated).docx

- **Paid invoices** → place on the **top-LEFT** of filing cabinet. Do not file yet.
- **Unpaid invoices / credit memos** → hand to **Juan**; Shannon sends to customers; then place **top-RIGHT**.
- **Yukon invoices / credit memos** → hand to **Hannah**.
- **Sirrocco invoices** → file immediately in the Sirrocco folder.
- **Log sheet** → hand to **TT**.

Sourced checklist

A practical answer drawn from the documented procedure.

Visible citations

Open the original SOP to verify the instructions before acting.

ACTUAL INTERFACE / LIGHT APPEARANCE

Search across procedures

Find receiving, invoicing, returns, purchasing and safety instructions by asking a question.

Explain the next step

Turn source procedures into checklists that retain approvals and exceptions.

Support employee training

Locate role-specific guidance and explain company terminology for new employees.

Employee question > permitted knowledge search > source-grounded answer > employee checks the SOP

Use approved, version-controlled SOPs. Enforce role-based access and keep important operational decisions with employees.

PRIVATE AI / PRODUCT INFORMATION

Product answers from company knowledge.

Give sales, purchasing and service teams one place to search approved product specifications, installation guidance and catalog information. Connect live stock and pricing only through permitted ERP access.

UFS Products AI Assistant

Quiet Queen (padding/underlayment) — documented specs:

- **Thickness:** 3.0mm / 3mm Padding_Specifications.docx +1
- **IIC Rating:** 86 dB Padding_Specifications.docx +1
- **STC Rating:** 89 dB Padding_Specifications.docx +1
- **Water Resistance:** Waterproof (moisture cannot penetrate closed cell membrane) Padding_Specifications.docx
- **Roll Width:** 4.0 ft Padding_Specifications.docx — conflicts with 3.6 ft in D120 D120 Technical ... Black.pdf
- **Sq. Ft. per Roll:** 100 sq. ft. Padding_Specifications.docx +1
- **Sq. Ft. per Pallet:** 5,000 sq. ft. (50 rolls) Padding_Specifications.docx

ACTUAL INTERFACE / LIGHT APPEARANCE

Find specifications

Locate technical features, materials, dimensions and approved product documents.

Compare documented options

Compare source information and flag conflicting or missing specifications.

Prepare customer answers

Prepare sourced responses for staff to review before sending.

Product question > approved catalog and specifications > cited comparison > reviewed customer answer

Separate static product documents from live inventory and prices. Verify availability, commercial terms and technical claims before quoting.

PRIVATE AI / REPORTING + AUTOMATION

Daily ERP reports. Less repetitive work.

Private AI can summarize permitted ERP reports and prepare routine follow-up work. This example uses a verified Odoo restaurant report excerpt. Live retrieval and scheduled execution require configured connectors, explicit rules and access controls.

Report-excerpt example — not a live connector extraction.

Date: 2026-09-10 · The Yu Kitchen

Source: Odoo › Point of Sale › Reporting › Restaurant KPIs

METRIC	VALUE
Sales	USD 7,416.18
Check per cover	USD 21.84
Food cost	25.9%
Waste	USD 74.44
Actual food cost	34.7%
Labour cost	USD 2,398.38

ERP report excerpt / defined date and source records

Illustrative Workflow Proposal (not executed)

1. 8 AM read-only ERP extraction.
2. Validate totals against source.
3. Flag exceptions for review.
4. Draft follow-up tasks.
5. Manager approves deliverables.
6. Deliver approved output.

No jobs scheduled, messages sent, tasks created, or records changed.

 Sep 16, 10:40 AM

Routine preparation / proposal only; no actions executed

Approved schedule › read-only ERP extraction › validation and summary › reviewed tasks or report delivery

The Yu Kitchen uses fictional demonstration data. Live ERP retrieval requires a configured connector. Log tool actions and keep payments, stock adjustments and order changes behind human approval.

03 / ERP SYSTEMS

ERP that makes operations visible.

Odoo connects customers, orders, purchasing, inventory, field work, projects, billing, and reporting around one shared operational record.

INDUSTRY FOCUS / WHOLESALE DISTRIBUTION

Inventory, fulfillment, and margin in one view.

Connect sales, customer pricing, purchasing, warehouse activity, returns, and reporting around one dependable operational record.

Reliable inventory availability

Demand-based purchasing

Clear warehouse execution

Customer and margin visibility

Continue to the Private AI and ERP examples on the next two pages.

WHOLESALE DISTRIBUTION / PRIVATE AI IN ACTION

Private AI for Distribution

Find the receiving rule, product detail or order context your warehouse and sales teams need.

Damaged receiving

Retrieve approved inspection, photo and supplier-claim procedures.

Product assistance

Compare approved product specifications and prepare a draft quotation.

Warehouse onboarding

Explain bin, picking and returns SOPs in the employee's preferred language.

Order analysis

Summarize permitted order and delivery reports for a supervisor's review.

ILLUSTRATIVE EXAMPLE

Business situation A pallet arrives with damaged cartons while the receiving manager is away.

Employee question What do we record before receiving this damaged shipment?

AI response or action Retrieve the approved receiving SOP, list required photographs and claim forms, and identify the escalation owner.

Business result The receiving team follows one documented process and prepares a complete record for review.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Receiving SOPs / product data /
returns policies / delivery reports

Give warehouse and sales teams a dependable place to find approved answers.

- + Private by design
- + Role-based access
- + Uses approved company information
- + Keeps company knowledge organized
- + Can support multilingual teams
- + Human review in important decisions

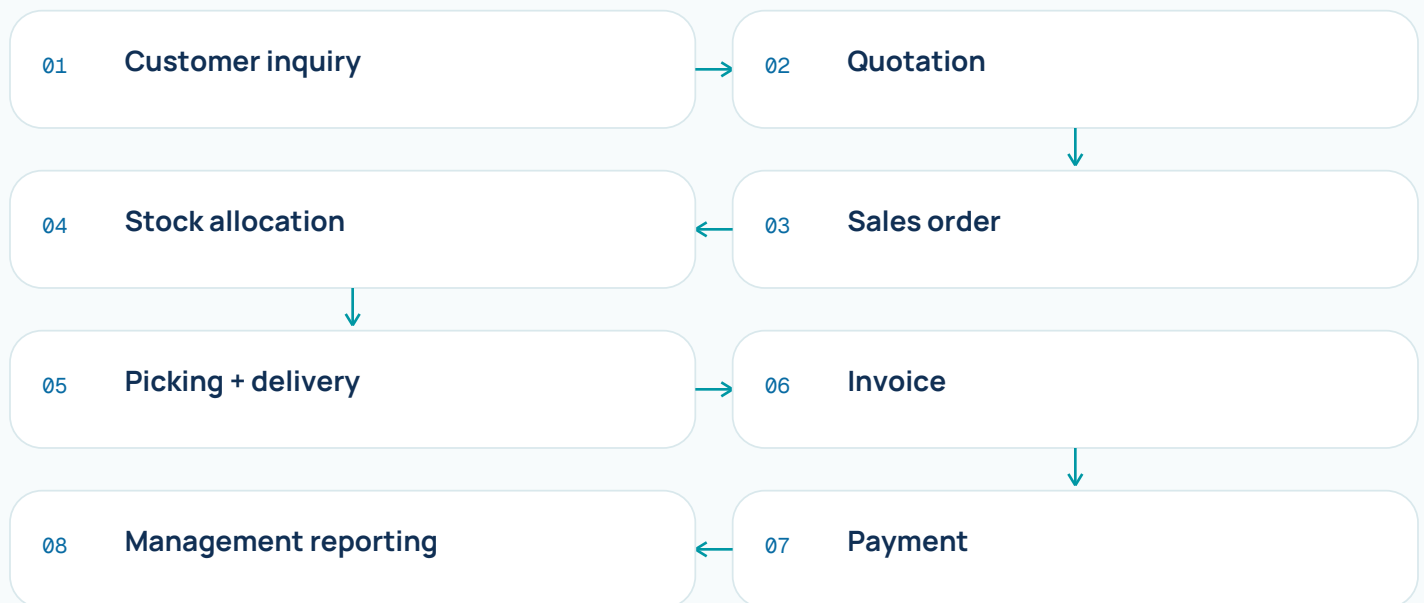

WHOLESALE DISTRIBUTION / ERP IN ACTION

Connected ERP for Distribution

One order. One workflow. A shared record from stock allocation to payment.

Stock promises based on spreadsheets / Repeated order entry / Late delivery and margin reports

RELEVANT MODULES

CRM + Sales / Inventory / Purchasing / Delivery / Accounting integration / Business reporting

ILLUSTRATIVE EXAMPLE

Before Yudaro

Sales promises stock from a spreadsheet while warehouse picking and invoice records live elsewhere.

Connected workflow

An approved sales order reserves inventory, creates picking and delivery records, and carries its reference through invoicing and payment.

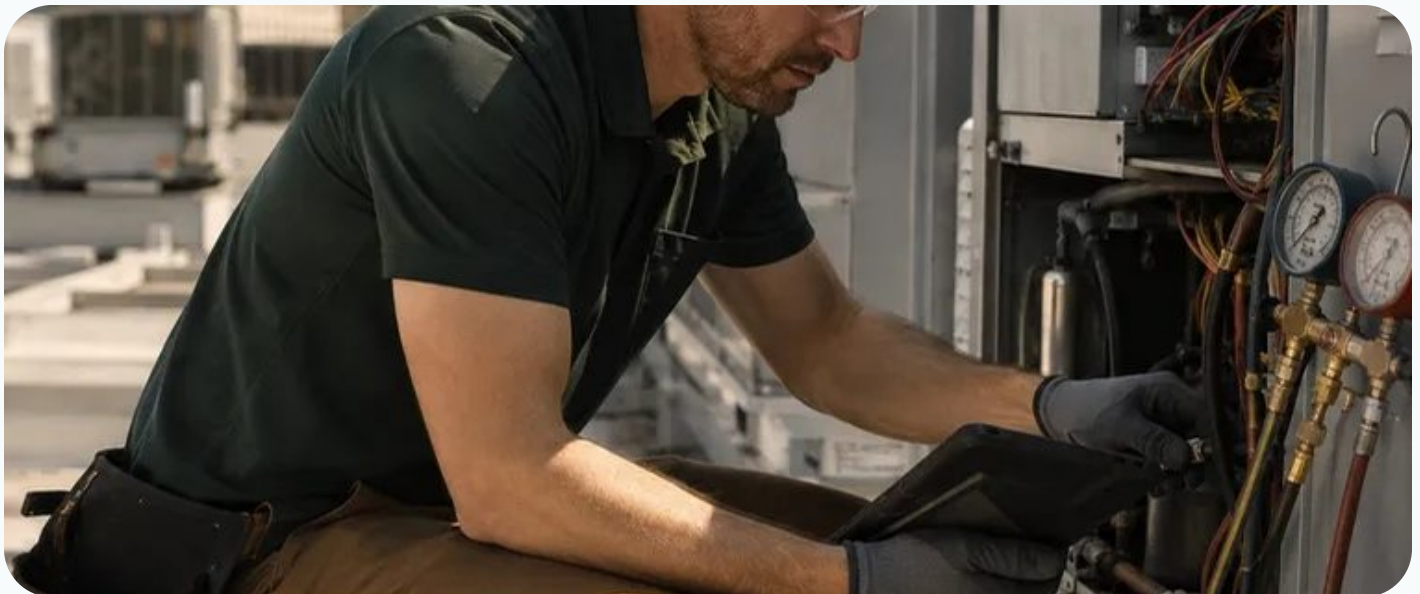

Management visibility

Which orders are waiting for stock? Which deliveries remain incomplete? Which invoices are overdue?

INDUSTRY FOCUS / HVAC + FIELD SERVICE

Give the field team the full service picture.

Connect CRM, dispatch, work orders, equipment history, parts, memberships, estimates, invoicing, and approved service knowledge.

Current equipment history

Cleaner dispatch and work orders

Parts and membership visibility

Approved knowledge in the field

[Continue to the Private AI and ERP examples on the next two pages.](#)

HVAC + FIELD SERVICE / PRIVATE AI IN ACTION

Private AI for HVAC & Field Service

Bring approved service knowledge and equipment history into the technician's working day.

Equipment knowledge

Find approved manuals and maintenance notes for the installed model.

Service preparation

Summarize permitted equipment history and previous work-order notes.

Technician onboarding

Retrieve inspection checklists, documentation steps and service SOPs.

Customer follow-up

Draft a service summary or maintenance explanation for authorized review.

Help technicians prepare with context while keeping technical decisions with qualified people.

ILLUSTRATIVE EXAMPLE

Business situation A technician visits a repeat service call with incomplete notes on the dispatched ticket.

Employee question What was done on this unit last time, and which approved checklist applies?

AI response or action Summarize accessible service notes and retrieve the matching manufacturer manual and company inspection checklist; flag missing details.

Business result The technician arrives with clearer context and documents the visit consistently. Qualified staff make diagnostic and safety decisions.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Equipment manuals / service SOPs /
work-order notes / maintenance
policies

+ Private by design

+ Role-based access

+ Uses approved company information

+ Keeps company knowledge organized

+ Can support multilingual teams

+ Human review in important decisions

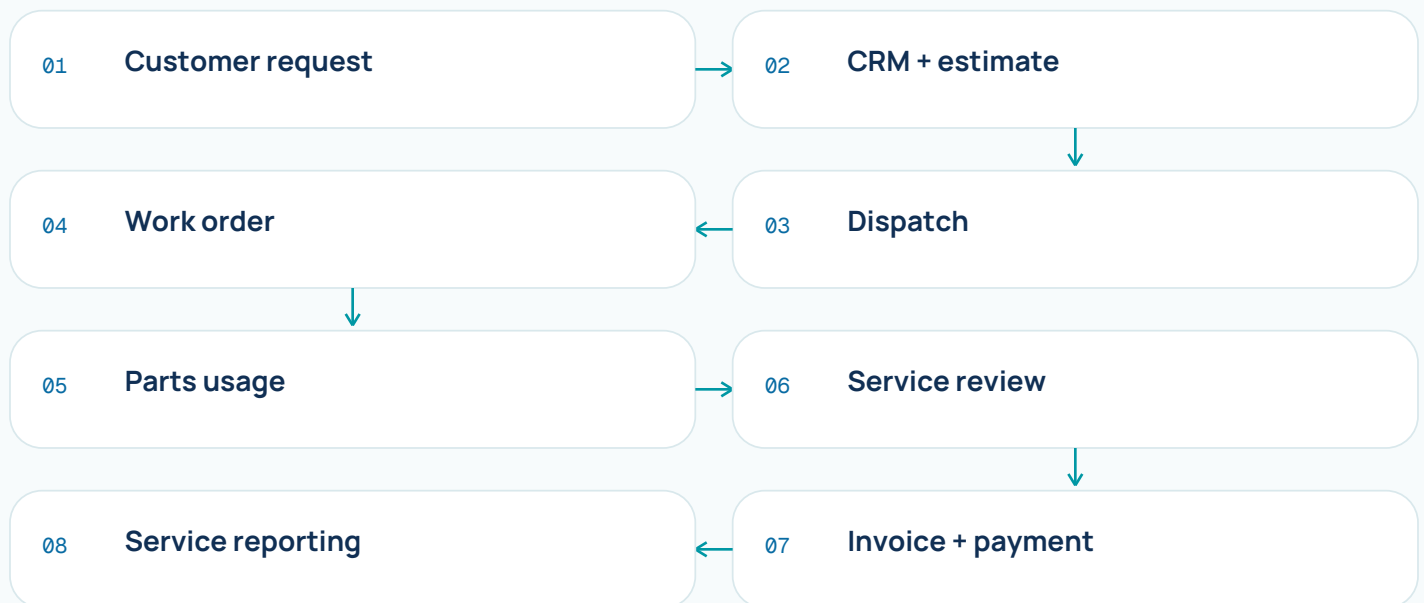

HVAC + FIELD SERVICE / ERP IN ACTION

Connected ERP for HVAC & Field Service

A complete service record, from the first request to the next maintenance visit.

Equipment history split across folders / Paper parts records / Unbilled or incomplete work orders

RELEVANT MODULES

CRM + Sales / Field service / Inventory / Employee scheduling / Accounting integration / Business reporting

ILLUSTRATIVE EXAMPLE

Before Yudaro

Dispatch, technician notes, parts usage and billing are tracked separately, leaving equipment history incomplete.

Connected workflow

The service request links the customer and equipment to a scheduled work order, recorded parts, review status and invoice.

Management visibility

Which calls remain open? Which parts need replenishment? Which completed visits have not been billed?

INDUSTRY FOCUS / CONSTRUCTION

Keep project facts current and accessible.

Bring projects, commitments, purchasing, documents, change activity, and job-cost visibility into a controlled operating workflow.

Current project documents

Commitment and purchasing control

Earlier job-cost visibility

Clearer change-order workflow

Continue to the Private AI and ERP examples on the next two pages.

CONSTRUCTION / PRIVATE AI IN ACTION

Private AI for Construction

Retrieve current project documents and prepare clearer handoffs between the office and jobsite.

Drawing and specification search

Find the approved revision and summarize relevant specification sections.

Change-order preparation

Draft a change log from authorized site notes and supporting documents.

Procurement context

Retrieve approved submittals, product schedules and purchasing requirements.

Site onboarding

Explain company documentation and escalation procedures from approved SOPs.

CONSTRUCTION / APPROVED COMPANY KNOWLEDGE

Keep project knowledge current and put review-ready context in the right hands.

ILLUSTRATIVE EXAMPLE

Business situation The project team receives a supplier substitution request before ordering materials.

Employee question Which approved specification and submittal apply to this substitution?

AI response or action Retrieve the current specification and permitted submittal, compare documented requirements, and draft questions for the project manager.

Business result The team assembles the review package faster. Authorized professionals retain design, contract and safety approval.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Approved drawings / submittals / specifications / change logs / site SOPs

- + Private by design
- + Role-based access
- + Uses approved company information
- + Keeps company knowledge organized
- + Can support multilingual teams
- + Human review in important decisions

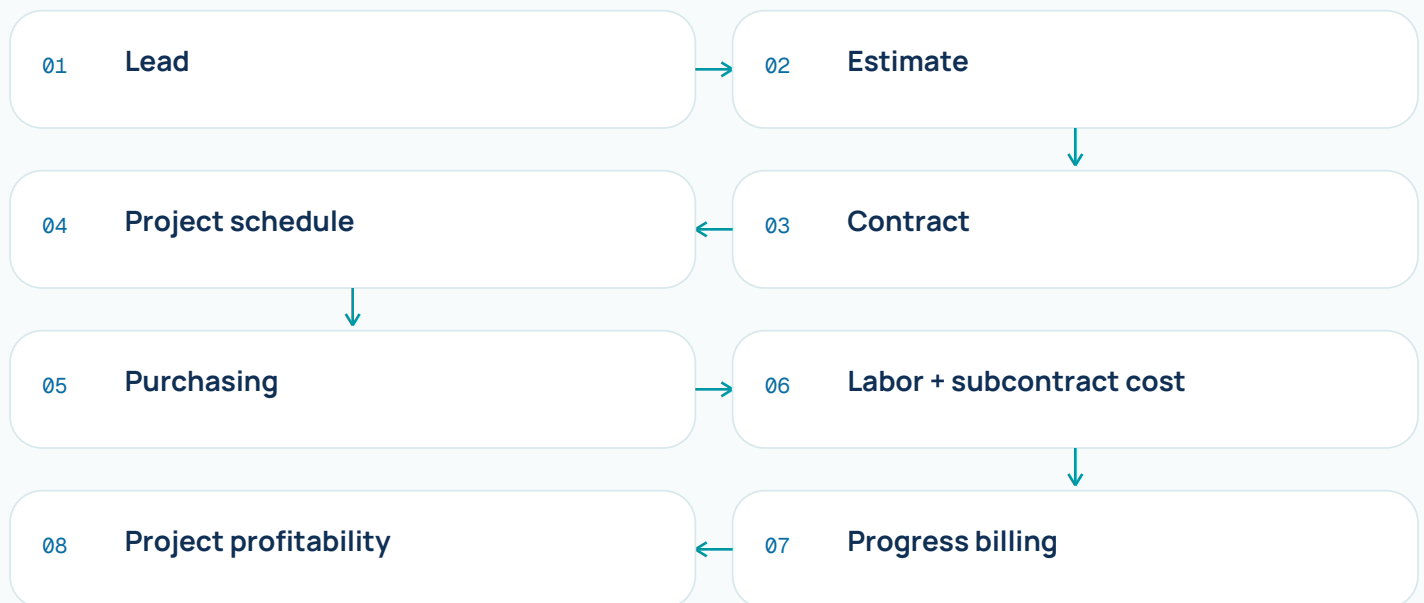

CONSTRUCTION / ERP IN ACTION

Connected ERP for Construction

Keep commitments, costs and billing connected to the same project.

Outdated project documents / Change costs missing from budgets / Delayed progress billing

RELEVANT MODULES

CRM + Sales / Project management / Purchasing / Timesheets / Accounting integration / Business reporting

ILLUSTRATIVE EXAMPLE

Before Yudaro

Estimates, commitments, timesheets and progress invoices are maintained in separate files.

Connected workflow

The contract opens a project; approved purchases and labor entries reference that job, and billing draws from its reviewed progress records.

Management visibility

Which projects are over budget? Which commitments are outstanding? Which approved changes are not yet billed?

INDUSTRY FOCUS / RETAIL

Connect products, customers, and locations.

Unify point of sale, inventory, purchasing, transfers, returns, ecommerce, and customer records across stores and channels.

Shared product and stock view

Multi-location inventory control

Demand-based replenishment

Practical customer follow-up

Continue to the Private AI and ERP examples on the next two pages.

RETAIL / PRIVATE AI IN ACTION

Private AI for Retail

Help store and customer-service teams find consistent product, returns and fulfillment guidance.

Product knowledge

Retrieve approved product details and compare permitted alternatives.

Returns support

Explain the current returns policy and identify an exception for a manager.

Store onboarding

Guide employees through opening, closing and stock-transfer SOPs.

Location reporting

Summarize accessible sales and inventory reports by store and channel.

ILLUSTRATIVE EXAMPLE

Business situation A customer asks to return an online purchase at a different store.

Employee question Can this store accept the return, and what records do we need?

AI response or action Retrieve the current cross-channel returns policy, identify required order evidence, and outline the authorized escalation route.

Business result Staff give a consistent answer and prepare the correct return record without making an unapproved exception.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Product catalog / returns policies / store SOPs / fulfillment reports

Consistent guidance at the counter, across every store and channel.

- + Private by design
- + Role-based access
- + Uses approved company information
- + Keeps company knowledge organized
- + Can support multilingual teams
- + Human review in important decisions

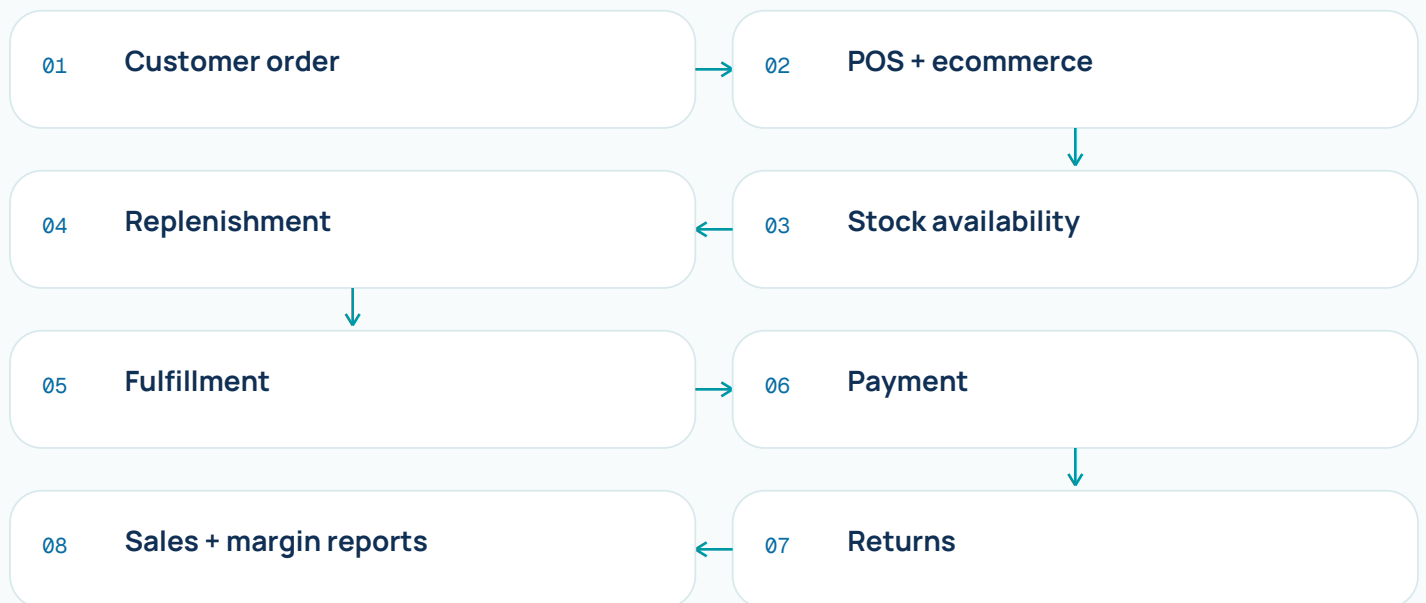

RETAIL / ERP IN ACTION

Connected ERP for Retail

One view of products, stock and customers across your selling channels.

Stock differences between channels / Manual store transfers / Returns missing from margin reports

RELEVANT MODULES

POS + Sales / Ecommerce / Inventory / Purchasing / Accounting integration / Business reporting

ILLUSTRATIVE EXAMPLE

Before Yudaro

Store sales, ecommerce orders, stock transfers and returns are reconciled after the day ends.

Connected workflow

A shared product record connects transactions, stock movements, replenishment, fulfillment and returns across locations.

Management visibility

Which locations are short of stock? Which products need replenishment? How do returns affect each channel's margin?

INDUSTRY FOCUS / MANUFACTURING

Align materials, production, and instructions.

Connect bills of materials, work orders, inventory, purchasing, quality procedures, and production reporting on one ERP foundation.

Material requirements visibility

Controlled BOM revisions

Current work and quality instructions

Production status reporting

[Continue to the Private AI and ERP examples on the next two pages.](#)

MANUFACTURING / PRIVATE AI IN ACTION

Private AI for Manufacturing

Make approved work instructions and production context easier to find on the shop floor.

Work-instruction search

Retrieve the approved instruction for the current product and revision.

Quality documentation

Summarize approved inspection procedures and prepare deviation notes.

Operator training

Explain setup and recording steps from controlled company documents.

Production review

Summarize permitted work-order, material and maintenance reports.

Put the current instruction within reach, with its revision and review path visible.

ILLUSTRATIVE EXAMPLE

Business situation An operator finds two versions of a setup instruction before starting a batch.

Employee question Which setup instruction is approved for this work order and revision?

AI response or action Retrieve the controlled instruction linked to the permitted work-order context, show its revision and flag conflicting documents for review.

Business result The operator can locate the current instruction. Supervisors retain release, quality and safety decisions.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Controlled BOMs / work instructions / quality SOPs / production reports

+ Private by design

+ Role-based access

+ Uses approved company information

+ Keeps company knowledge organized

+ Can support multilingual teams

+ Human review in important decisions

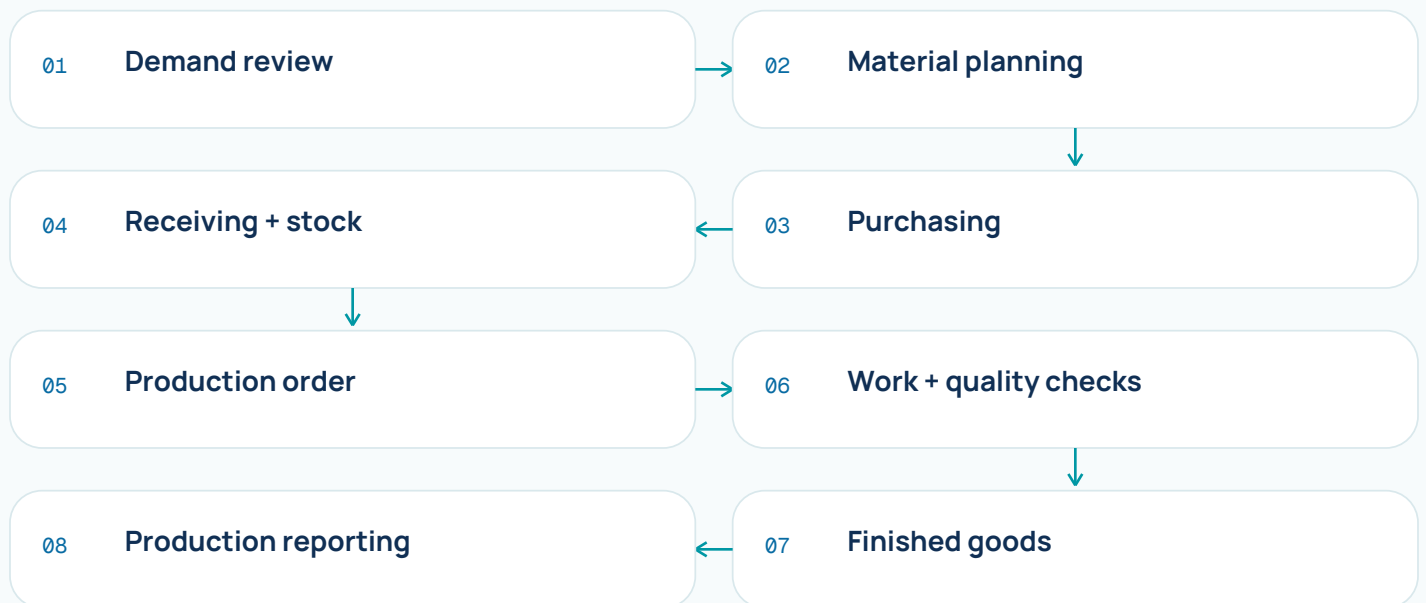

MANUFACTURING / ERP IN ACTION

Connected ERP for Manufacturing

Align materials, approved instructions and production status on one foundation.

Material shortages discovered late / Conflicting instruction revisions / Production status gathered manually

RELEVANT MODULES

Manufacturing / Purchasing / Inventory / Quality control / Maintenance / Business reporting

ILLUSTRATIVE EXAMPLE

Before Yudaro

Material needs, BOM revisions, shop-floor progress and quality records are reconciled through separate sheets.

Connected workflow

Planning references controlled BOMs, links purchase and stock records to production orders, and records progress and reviewed quality results.

Management visibility

Which work orders lack materials?
 Where is production delayed?
 Which batches are waiting for quality review?

INDUSTRY FOCUS / PROFESSIONAL SERVICES

Move cleanly from engagement to delivery.

Connect CRM, projects, resources, time, approved templates, recurring work, billing, and client reporting without repeated data entry.

Consistent client handoffs

Project and capacity visibility

Time-to-billing workflow

Private team knowledge

Continue to the Private AI and ERP examples on the next two pages.

PROFESSIONAL SERVICES / PRIVATE AI IN ACTION

Private AI for Professional Services

Support client delivery with approved templates, engagement knowledge and project context.

Proposal preparation

Draft proposal sections from approved service descriptions and templates.

Engagement knowledge

Find permitted client notes, deliverables and project decisions.

Meeting summaries

Prepare action lists from authorized meeting notes for team review.

Team onboarding

Retrieve current delivery checklists, time-entry rules and billing procedures.

PROFESSIONAL SERVICES / APPROVED COMPANY KNOWLEDGE

Turn engagement knowledge into a clearer handoff for the next person.

ILLUSTRATIVE EXAMPLE

Business situation A project manager takes over an engagement midway through delivery.

Employee question What deliverables are approved, and which decisions are still open?

AI response or action Summarize accessible scope documents, meeting decisions and the deliverable checklist; identify gaps and link the source records.

Business result The manager prepares a clearer client handoff. Authorized staff review contractual, accounting and employment matters.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Scope documents / approved templates / meeting notes / delivery SOPs

- + Private by design
- + Role-based access
- + Uses approved company information
- + Keeps company knowledge organized
- + Can support multilingual teams
- + Human review in important decisions

PROFESSIONAL SERVICES / ERP IN ACTION

Connected ERP for Professional Services

Connect scope, effort and billing to the same client engagement.

Client handoffs depend on individuals / Time entries detached from billing / Capacity and margin reports lag

RELEVANT MODULES

CRM + Sales / Project management / Timesheets / Accounting integration / Business reporting

ILLUSTRATIVE EXAMPLE

Before Yudaro

Proposals, project plans, time records and invoices sit in separate systems with repeated entry.

Connected workflow

The accepted proposal opens a project; time and expense records follow approval before invoicing and engagement reporting.

Management visibility

Which engagements exceed planned effort? Which approved time remains unbilled? Where is delivery capacity constrained?

INDUSTRY FOCUS / RESTAURANTS

Restaurant profit and AI readiness.

A tailored diagnostic identifies hidden profit leakage across food cost, labor, purchasing, inventory, waste, training, and management visibility.

Food-cost and recipe controls

Buffet waste and demand visibility

Purchasing and inventory discipline

Owner independence and employee knowledge

Made-to-order restaurants / Chinese buffet restaurants

RESTAURANTS / PRIVATE AI IN ACTION

Private AI for Restaurants

Give made-to-order and Chinese buffet teams a practical way to find approved operating knowledge.

Recipe and portion guidance

Retrieve approved recipe cards and preparation or portion instructions.

Kitchen onboarding

Explain the company's station, opening and closing SOPs to multilingual teams.

Buffet production knowledge

Find approved replenishment, batch recording and waste-log procedures.

Owner and manager questions

Summarize permitted food-cost, purchasing, labor and waste reports.

ILLUSTRATIVE EXAMPLE

Business situation A Chinese buffet supervisor sees repeated leftover trays during a quieter lunch service.

Employee question What do our approved batch and waste-recording procedures say for lunch?

AI response or action Retrieve the buffet batch SOP and waste-log requirements, and summarize accessible guest-count and production records for manager review.

Business result Managers can discuss batch planning with better records. Food-safety and staffing decisions remain with responsible personnel.

Employees and Managers

Yudaro Private AI

Approved Company Knowledge

Approved recipes / kitchen SOPs / purchasing records / labor + waste reports

Make kitchen knowledge accessible and keep operating decisions with the team.

- + Private by design
- + Role-based access
- + Uses approved company information
- + Keeps company knowledge organized
- + Can support multilingual teams
- + Human review in important decisions

RESTAURANTS / ERP IN ACTION

Connected ERP for Restaurants

Bring food cost, purchasing, waste and labor into the same management view.

Recipe usage detached from stock / Buffet waste not recorded consistently / Purchasing and labor reviewed too late

Made-to-order tickets, buffet batch sheets, stock counts and labor schedules are reviewed in separate files.

Connected workflow

Made-to-order POS and kitchen records link demand to ingredient use. Buffet guest counts, production and waste records connect to replenishment, purchasing and labor.

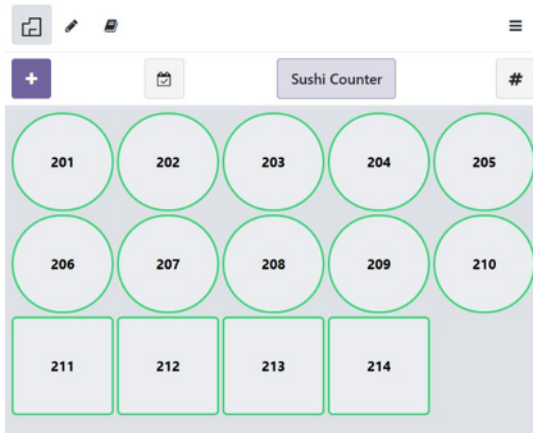

Management visibility

Which menu items have the highest food cost? What was discarded by batch? Which supplier prices changed? How does labor compare with demand?

OD00 ERP / THE YU KITCHEN EXAMPLE

Restaurant POS meets the back office.

The Yu Kitchen demonstrates an all-you-can-eat buffet, an a la carte sushi bar and a gift shop, with reservations and takeout on its Odoo website. The example connects guest-facing service with restaurant operations.

Restaurant POS / sushi bar service

Sushi-bar POS

The live Sushi Counter floor plan provides a service view for tables 201-214. Pair this guest-facing workspace with owner reporting in the back office.

Last day of trading: Thu 10 Sep			
Sales	Covers	Check per cover	Food cost
\$ 7,416.18	273	\$ 21.84	34.7%
Labour	Prime cost		
32.3%	65.0%		
Last 30 days			
Sales	Covers	Waste and variance	Prime cost
\$ 251,796.70	9303	\$ 2,813.17	49.9%

Back office / sales, covers, food and labour costs

[Website or table order](#) > [POS service](#) > [kitchen preparation](#) > [checkout](#) > [stock and management review](#).

The Yu Kitchen is a fictional Odoo demonstration, not a customer success claim. Features shown depend on the installed modules and database configuration.

Business websites built to work.

Strategy, content, technology, and ongoing care come together in a site designed for credibility and practical business results.

Strategy + UX

Responsive design

Business integrations

Search foundations

07 / EQUIPMENT

Infrastructure matched to the workload.

Equipment is selected around the application, user load, security requirements, and expected growth - from compact business systems to dedicated AI and ERP servers.

Choose infrastructure around the application and operating requirements.
